

# Telecom Expense Management

Cost savings, control and visibility for telecom devices and services

## Business Benefits

- Easily review and evaluate all service and hardware costs, devices and carriers under one portal.
- Wireless and Wireline management of carrier expenses in one place.
- Reports and KPI metrics easily customized to your needs.
- Peace of mind – secure data and applications.

## Total visibility and control of telecom expenses in one easy to use web-based platform

Manage Mobility's Telecom Expense Management platform, Managed Tel<sup>®</sup>, allows for easy review and evaluation of both service and hardware costs across all individuals, departments, and carriers. Make cost effective decisions based on centralized, comprehensive, standardized data and industry knowledge.

Managed Tel is easily integrated with your business process to drive efficiencies and productivity through consolidated reporting and analysis and truly optimized TEM management.

Managed Tel is option/module driven so you can easily select exactly what you need for your business requirements and have access to reports, information, and functionality, custom to your needs.

## Core functionality includes:

- Inventory expense management - user and location details
- Multi-lingual and multi-currency
- Configurable user access, role base management
- Executive analytical dashboard
- View invoice details by service type to call detail records
- Robust reporting analytics and scheduled delivery management
- Submit MACD (Moves, Adds, Changes, Disconnects) through the solution
- Custom business hierarchical level set up and management
- Integrate into HR systems or ERP systems for accurate data management

Managed Tel Portal

Managed Tel offers robust, ready to use functionality that can be easily customized by enabling a multitude of options, views and dashboards in standard modules.

**Executive Dashboard**- Custom to each user, set a KPI Metric window to show key values of your Telecom program. Collect key analytics and drill down to specific hierarchies or cost centers and the entire site reflects that choice for easier expense management.

**Reporting Module** - The reporting module allows you to pull reports on all aspects of your Telecom program from Wireless, Wireline, Network and converges them all together. Standard reports covering 95% of all reporting needs are immediately available; or create custom reports to look at the data differently or in more detail.

**Container Module** – Easily manage, archive, store and access all of your reports and manage report sharing. Add comments to a report, share it with team members and they can add additional comments or respond to questions about the report through the solution that stay with the report.

**Billing Module** – Dynamic billing grid that lets you easily import invoices and create summary views or carrier level detailed views. All invoice formats are standardized so you only have to learn how to read one structure type of invoice INSTEAD of having to understand each carriers.
